Donald F. Schenkel 10646 Maple Springs Cove Fort Wayne, IN 46845

January 22, 2010

Dear Members of the City-County Space Utilization Task Force:

As members of the greater Fort Wayne business community, we have been closely following the discussions between the City of Fort Wayne and Allen County as a mutual solution to the space needs of local government is pursued. While we applied the leadership of the City and County on this issue, it is time for our voices to be heard.

We are business owners, employers, investors, executives, volunteers, family members and above all else, citizens of this community. We care deeply about its success, and we regard our civic responsibility as seriously as you do. Therefore, we urge the task force to develop a plan that takes full advantage of the City-County Building and 200 East Berry Street.

Our reasons:

- We believe that we are one community.
- We believe that the City-County Building and 200 East Berry Street are the foundation for an equitable solution that can bring nearly all local government together.
- We believe our community's top priority must be the creation and retention of jobs, and a joint answer
 to local government's building and space needs will send an important signal to the world that our
 community is unified in purpose and equipped to compete.
- We believe that few of our citizens differentiate between the various levels of local government and that we must do everything possible to make all local government easier to use, more cost effective and more responsive to their needs. Those objectives are even more important to the business community as we work with our elected officials to build a vibrant local economy.
- We believe that local government collaboration and cooperation are good for our community and good for business and that co-location is an investment that will promote those values.
- We believe that best practices combined with common functionality and smart space planning can yield significant efficiencies for local government operations.
- We believe those efficiencies can be translated into cost savings while still ensuring the delivery of high-quality services to all citizens.
- We believe that co-located local government will save tax dollars and better serve the public.
- We believe that this is a decision that is right for our community and that the time is right to make it happen.

Given the many benefits outlined, we strongly support the co-location of local government in the City-County Building and 200 East Berry Street. We also support the use of the City-County Building for both police departments. Do not allow this moment to pass. Act swiftly to make this a reality. This letter has also been endorsed by the individuals listed on the attached schedule.

Thank you for your hard work on behalf of our community.

Sincerely yours,

Donald F. Schenkel

Don Schundel

January 26, 2010

Dear City-County Space Utilization Task Force:

As a membership organization representing the Greater Fort Wayne business community, we have been observing the discussions between the City of Fort Wayne and Allen County in pursuit of a solution to the space needs of the two local government organizations. We commend the leadership of the City and County for working on this issue, but feel it is time for us to step forward and express our opinion.

Our Chamber members provide the foundation for this community through their entrepreneurial efforts as business owners, employers, investors, and executives, and they also make substantial contributions as volunteers, family members and taxpayers. As such, we are deeply invested in the success of our community and believe it is our civic responsibility to make our opinions known, namely our belief with regard to this issue that whatever plan is adopted should contribute to the efficiency of both organizations and take full advantage of both the City-County Building and the building located at 200 East Berry Street.

The Chamber is aware that a group of local businessmen recently sent you a letter expressing a similar point of view regarding space allocation in the two buildings. We agree with the reasons they listed in their letter, which appeared on the opinion page of *The Journal-Gazette* last Saturday, but don't believe it is necessary to re-list them point by point in order to get our message across. Suffice it to say that the Chamber is on the same page with those business leaders in regard to this issue.

In addressing the space needs of the City and the County, and the space that is available in the City-County Building and the Berry Street building, The Chamber asks that you keep in mind what is best for our community. We ask that you remember your bosses, the local taxpayers, and make the most efficient use of the available space so that our local government operations will conserve tax dollars that can be used for other priorities.

As business leaders, our Chamber members believe that job creation and retention should be the top priority of this community, because these form the framework of all future economic success. In order to accomplish these goals, we need to work together as a unified community so that Fort Wayne and Allen County remain an attractive place in which to live and do business. What better way to illustrate this unity than by our two units of local government — the City and the County — working together toward common goals and for the best solutions to their space needs?

We believe that the City and the County can and should co-locate at both the City-County Building and at the Berry Street building. Our only recommendation in regard to specific space allocation is that we believe it is in the community's best interest to locate both the Fort Wayne Police Department and the Allen County Sheriff's Department in the City-County Building. It makes sense to house two organizations with similar missions in the same building in order to keep our community safe and secure in the most efficient manner.

We ask that you give serious consideration to the opinions of the Chamber expressed herein, and that you take swift action in finding the best solutions to the issue at hand. Time is of the essence to get this done, and we thank you for your consideration.

Sincerely yours,
While Lands

Mike Landram, President and CEO, on Behalf of the Board of Directors of

The Greater Fort Wayne Chamber of Commerce

Under one of the scenarios being studied, employees who interacted directly with the public would be housed separately from those employees in the department who have little direct contact with the public. Could your department operate if the public-facing staff where housed separately from the "back-office" staff? Explain.

Building Department	This would cripple the Department's efficiency. Our back-office and field staff interact routinely with front office staff on projects. Both groups share the same files and resources. Public/Customer Service would be disrupted. Management staff supervises front office and back office staff, separating them would make supervision less effective and possibly require an additional staff person.
County Highway	We do receive a number of permit requests (by phone and at the counter). These are mostly handled by our receptionist/secretary, who also handles secretarial duties for the Department.
	The predominant and major public interaction takes place/involves our management and engineering staff in "sit-down meeting" formats or in going over plan and drawings from the plan files.
Board of Public Works/Barrett Law	No. All of our staff is cross trained. Each individual's job has elements of public contact.
Transportation Engineering City Engineer	No; City Engineering works closely with TES and TED Project Coordinators and Administrative Support staff.
Traffic Engineering	We do not differentiate between "public facing" staff and "back-office" staff. Interaction between all staff is necessary and all staff needs to be housed at one location.
Transportation Engineering Services	 No, all staff should remain together. Our department is comprised of project teams. Every 3 project coordinators are assigned one draftsperson. The project coordinator's proximity to the draftsperson is critical to project efficiency and cohesiveness. We will also bring 3 additional field staff to assist with drafting. It's imperative that all staff remain in one location. His duties are integral to our operation and easily and readily accessible. Not possible with this group as they are assigned field specific duties.
Transportation Administration	No – the public facing staff rely on back office staff to help public face-to-face. This includes Right of Way, Land Acquisition, Inspection, Permits, Finance Director and Assistant.
Department of Planning Services	No, this office could not operate if the public-facing staff were housed separately from the "back office" staff. Mainly because this office does not have a "back office" staff. I'm assuming you defining a "back office person" as a staff person who could review plans and do not interact with the public. This office does not have enough staff to operate a public facing and a back office staff.
	This office goes as far as having an "on call" schedule where staff are available to back up front office intake when there is a question or situation that merits additional expertise. Because of the number and several types of current, open projects, all staff work with the public.

Energy and	No we cannot operate separately. Customers often walk in needing answers to
Environmental Services	general questions. If the front line Customer Reps cannot answer or satisfy the customer, the manager needs to be available.
City Utilities – Policy and Planning	Yes, this is somewhat the way we function today. However, we have one position, Energy & Environmental Services that deals more with public/outside visitors.
City Utilities -	Not applicable.
Engineering City Utilities – Development Services (DVS)	Marginally possible. DVS public/customer base is narrow/focused to item described above — we do not serve the general public. While we utilize (and need) a common area/counter to serve our public/customer walkins it is specific to certain audience and types of projects (new development, new customer connections); with that said, all DVS staff will have an occasion to meet with our customers at the front counter on a daily basis — some staff more than others. We share project files and often have to go to the file cabinets or sometimes offices to access a project file to serve customer at the counter. Current "front office staff" process/handle 60% to 70% of the public/customers that come to our office — the remaining are handled by the (semi) back office staff.
Department of Health	It would not work very well for our department for the following reasons: (1) The public facing staff interact with the back-office staff on an ongoing basis throughout the day for consultation and plan review for example — and the back-office staff routinely become public-facing staff as they respond to the front office inquiries all day long. IN SHORT, most of our staff are public-facing staff throughout the day and "un-weaving" them would be difficult and most likely cause a dysfunctional environment; (2) The public-facing staff often discuss sensitive information (such as medical information or disease outbreak information for example, that is best done in a "department of health" setting vs. any sort of "general" public setting; (3) The records and materials referenced by both the public-facing and the back office staff must be easily accessible to both at all times and easy to sit down together to review. Separating the people would require separating the records/files in some fashion again most likely causing a less efficient work environment; (4) Managing staff is already difficult. If you combine various staff from various departments who function under various policies and procedures (and rightfully so), you will cause a competitive/fragmented environment. Further, supervision is difficult as it is in a large department especially because we have three campuses of operation already. If you separate our staff any further — you will significantly fragment our ability to supervise in a minimal way that we need to; (5) Lastly, the public-facing staff are often shared among divisions as needed due to significant short staffing Issues. If they are located separately from other staff and a need arises the geographical separation will make staff-sharing less possible and therefore create the need for more staff to make "coverage of duties" possible. Please seriously consider the impact to the departmental functionality on this issue. Thank you in advancel

Honorable Mayor Tom Henry City of Fort Wayne And Commissioners Brown, Bloom, and Peters Allen County Indiana One Main Street Fort Wayne, IN 46802

RE: City-County Co-Location Task Force Study

Mayor Henry and the Commissioners:

As part of the current co-location study and cost estimates being performed by SCHENKELSHULTZ and Design Collaborative, we were tasked to provide results for three tasks. We have completed the first, and the second and third items are underway....however, based on the information gathered and observations made to date, we feel we need to offer preliminary findings and inquire on further direction:

As a recap, the three tasks are as follows:

- Due Diligence: SSA and DC have toured all potentially affected departments in several buildings. Additionally, each department has provided a response to a survey that Pat Roller, Chris Cloud, John Stafford, and our firms compiled that inquired on current space usage, needs, and operational items.
- Study and Cost the Co-Location Option where Public Safety is Co-Located in the City-County Building. Study to have more refined parameters, and more defined cost estimates.
- Study and Cost Partial Co-Location Option where Public Safety is not Co-Located, and where
 Development and Expanded Development departments are each housed as separate "frontoffice" and "back-office" functions, in separate buildings. This portion of the study is to have
 equally refined parameters, and more defined cost estimates as the Co-Location Study.

Based on our findings and efforts to date, and our professional experiences, we believe the third task defined above is very questionable as a functionally viable second co-location option. This is based on efficiency, the departmental surveys and our experience as architects and engineers utilizing these City and County services. As such, we respectfully ask for your direction on whether to proceed in efforts for the second option.

As back up to our inquiry, we offer the following information for your consideration.

The survey to departments requested, among other items, a response to the question regarding efficiencies and possibilities of separating departments into "front office" and "back office" functions – with the possibility of locating the front and back-office functions in different buildings. The question directly addressed, to the operational department heads, the implications of Task # 3 above. You will see in the attached summary the responses from these departments. Additionally, our professional experiences with most of these departments support the responses that there are, in many instances, no "front office" persons, but that many persons are involved in the discussions and workings of the review and development processes.

- The second co-location option is in conflict with two of the "guiding principles" developed in 2005, specifically "maximizing efficiencies and space utilization" and "placing a high priority on co-locating...departments which provide service the general public".
- While not studied completely, we assert that developing a "front office" service counter area for the
 development, expanded development and utilities teams would lead to greater inefficiencies and
 frustrations for the public by not providing access to entire departments in singular locations.

To be clear: while we are prepared and intend on completing the tasks you have engaged us to perform, we feel it necessary, in our professional roles, to make you aware of our observations regarding this option. We do not believe it will result in a beneficial community asset that could be achieved by a full co-location of these departments.

Respectfully submitted,

Design Collaborative
