

CITY OF FORT WAYNE CITY UTILITIES

2000 Block Flaugh Road Septic Elimination Project Overview

City Utilities is working to eliminate failing septic systems in the city, by making connections to the public sanitary sewer system available for these properties.

The Problem

Septic systems have a limited life and eventually fail. In addition, the soil types in Allen County are poor for septic waste absorption. As a result, human waste leaches into groundwater, backyards and neighborhood ditches and streams. Failing septic systems are linked to unsafe levels of *E. coli* in many neighborhood streams and ditches.

The Solution

To address health hazards in our neighborhoods, the Septic Elimination Program (SEP) was implemented to convert many neighborhoods on septic systems to public sanitary sewer service. Neighborhoods with higher septic system failure rates are the priority of our program.

This project will bring sewers to approximately 11 homes by November 2013. This will address approximately 2% of the 500 homes still on septic systems in Fort Wayne.

Approximately 11 properties are part of the 2000 Flaugh Road project. This project will include 1,663± lineal feet of 8" pipe to service 11 properties.

Project Status

Project Status: In Design

Construction Period: September 2013

Estimated Project Costs: \$95,310

Approximate # of Properties in the Project: 11

Cost per Property: \$8,664.55

Project Benefits:

- Improved quality of life; worry free use of home facilities
- Reduced maintenance worries
- Improved environmental and health conditions for homes and neighborhoods
- Greater protection for well water, streams and drainage ditches
- Homes possibly become more marketable
