City Utilities is working to eliminate failing septic systems in the city, by making connections to the public sanitary sewer system available for these properties.

The Problem
Septic systems have a limited life and eventually fail. In addition, the soil types in Allen County are poor for septic waste absorption. As a result, human waste leaches into groundwater, backyards and neighborhood ditches and streams. Failing septic systems are linked to unsafe levels of \textit{E. coli} in many neighborhood streams and ditches.

The Solution
To address health hazards in our neighborhoods, the Septic Elimination Program (SEP) was implemented to convert many neighborhoods on septic systems to public sanitary sewer service. Neighborhoods with higher septic system failure rates are the priority of our program.

This project will bring sewers to 4 homes by March 2014. This will address approximately 1% of the 500 homes still on septic systems in Fort Wayne.

Four (4) properties are part of the Hill Court Area project.

Project Status: In Design
Construction Period: December 2013
Estimated Project Costs: $To Be Determined
Approximate # of Properties in the Project: 4
Cost per Property: To Be Determined

Project Benefits:
- Improved quality of life; worry free use of home facilities
- Reduced maintenance worries
- Improved environmental and health conditions for homes and neighborhoods
- Greater protection for well water, streams and drainage ditches
- Homes possibly become more marketable
