

Wyandotte Drive Storm Drainage Improvements

Project Fact Sheet

March 2017

Project Goals

1. Improve drainage along Wyandotte Drive from North Drive to Sough Drive and at intersections;
2. Reduce standing water on private properties.

Project Description

Currently stormwater runoff collects in areas along the sides of Wyandotte Drive and stands at the intersections of Wyandotte Drive and North Drive and at Wyandotte Drive and South Drive. The existing conditions limit the ability for stormwater to flow away from private properties resulting in standing water. This project involves the installation of 2,700 lineal feet of new storm sewers and the creation of 3,700 lineal feet of swales (shallow, grassed ditches) to collect and route stormwater runoff. Contractor: Ironclad Excavating

Project Time Line

June 2015 – August 2016 – Project design
November 29, 2016 – Meet the Contractor Meeting
Late November 2016 – Construction begins
May 15, 2017 – Final completion

Project Cost

Design and construction \$410,000
